## **Image Technology Laboratories (ITL) Completes Installation of WarpSpeed RIS/PACS at Orthopedic Associates of Binghamton, NY**

**March 16, 2009, Kingston, NY—Image Technology Laboratories (ITL)**, an industry leader in providing radiological workflow and imaging solutions, announces that Orthopedic Associates, P.C. is the latest clinical practice to select ITL's WarpSpeed RIS/PACS technology, now operational at its Binghamton, NY facility. The WarpSpeed system stores digital X-ray imaging studies acquired from several Computed Radiography (CR) systems and an MRI, providing both on-site and off-site access to the images and patient records by the orthopedic surgeons via the ITL WebServer and WebViewer. Special patient-surgeon review workflow capability allows administrative staff to remotely pre-position imaging studies on computers running the ITL WebViewer in dozens of dedicated patient suites, thereby improving surgeon productivity while maintaining HIPPA compliance.

"We are excited about working closely with the Orthopedic Associates group in helping them enhance the efficiency of their operations and improve patient care through the use of our technology" said Lewis M. Edwards, Chairman and CTO of ITL.

"Orthopedic Associates is pleased to partner with ITL to bring together traditional radiology services and advanced imaging technology to facilitate communications among providers to help better serve our patients" noted practice manager, Carolyn Schuster.

### **About Orthopedic Associates, P.C.**

Orthopedic Associates of 65 Pennsylvania Avenue is a musculoskeletal multi-specialty group consisting of comprehensive orthopedic and spine care. The physicians in the group, Kamlesh Desai, MD, David W. Ellison, MD, Erik D. Hiester, DO, Douglas Kerr, MD, Michael G. McClure, MD, Laurence U. Schenk, MD, Eric A. Seybold, MD, Douglas J. Taber, DC. , have over 100 years of combined experience treating musculoskeletal disease in the Southern Tier.

The physicians are certified in the sub-specialties of hand, sports medicine, chiropractic, foot and ankle, total joint replacement as well as spine surgery and pain management.

The practice works closely with other related health care services at their location, offering added convenience to their patients.

## **About Image Technology Laboratories, Inc.**

ITL is a medical image and information management company in the healthcare IT market. The Company has developed a unified Radiology Information System / Picture Archive and Communication System (RIS / PACS), for seamless management of patient information and medical images by hospitals, diagnostic imaging centers and clinical practices.

ITL's WarpSpeed RIS / PACS is a HIPAA-compliant business solution for the practice of radiology or medical imaging in a clinical practice. Through its unique and flexible architecture, the ITL WarpSpeed RIS / PACS offers, in a single system, a product that can encompass all facets of the business of radiology / medical imaging. It cost effectively scales from small imaging centers and clinical practices to large hospital enterprises, including interfacing with Hospital Information Systems (HIS) via HL7. Many of the subsystems within the ITL WarpSpeed RIS / PACS may be de-configured to reduce costs in installations where the function is not required or is provided by an existing non-ITL product. At the heart of the system is the workflow manager that assigns and routes units of work across the enterprise, able to link hospitals and multiple freestanding centers that have a business relationship to form one large cooperative radiology practice. Diagnostic images and reports produced within the ITL WarpSpeed system are immediately and securely accessible to authorized and authenticated clinical practitioners via the ITL WebViewer over the internet and/or intranet via the ITL WebServer.
